

These are the Questions we pose to you:

What are you going to do about rising fuel costs?

What can you do to help reduce your carbon footprint on the earth?

These are the Facts we want you to know:

Did you know we would have 300 times the resources currently available through global oil if we made use of 1% of the geothermal energy available in the top 5 miles of the earth's surface? This is an amazing statistic and according to the US Geological Survey this may just be the beginning of the non-fossil fuel supplies available to us. Now is the time for change.

There are limitless contributions that you can do to help make a difference...

Start today by educating yourself on the options available to move away from fossil fuel dependency. This educational session is to give you an indepth look at geothermal for heating and cooling and also give you the opportunity to see the units working.

Understanding the value of Geothermal vs Cost:

Just so that you know most applications pay the homeowner back in 3-7years. The up front cost might be there but think of the savings over time. We will be able to provide you with information on how to make geothermal an affordable possibility. And just think the environmental payback starts the moment you stop using fossil fuels!

You are invited to join us for an educational session:

When: Tuesday, June 23rd from 6:00-8:00pm

Where: Ultra Geothermal in Barrington, NH off of Route 4.

We are located 1 mile west of the Lee traffic circle going toward Concord. Seating is limited to the first 30 so Please RSVP to the event by emailing Melissa at maho@ultrageothermal.com or calling 603-868-7878. We hope you can make it!

Ultra Geothermal wants to make geothermal heating and cooling the "green apple" of your eye.
